X325

In order to give you a better service, **SKL** is constantly looking for ways to help you upgrade your customer service. For this reason, our research and development department has been working overtime to release this option just in time to cool the upcoming heat.

With a constantly growing demand in the replacement part market; we are adding to our product options which will help you take hold of a market you could not have access to. This new option will reposition you in a more competitive place versus your competitor.

Let us introduce to the « **X325 Header** », comparable physically to the built of a « **Tube and Block** » or « **Bar & Plate** » which you presently find on the market. Nonetheless by using our own technology and advanced

conception, we have achieved to manufacture a header more resistant to both vibration and high pressure. Furthermore, teamed with our extruded tube accurately manufactured the « **X325 Header** » increases the mechanical resistance of our heat exchangers.

This new heavy duty option significantly improves its strength, combined with our integral brazing process the **X325** is an assured value for you and your customer.

New option

Strengths :

- ✓ Resists to greater vibrations & impacts
- ✓ Resists to a greater pressure
- ✓ Superior stress tolerance
- ✓ More flexible to assemble
- ✓ Designed for heat exchangers on compressors, forest and industrial machinery and more

Now available for radiators, charge air and oil coolers..

Don't get caught empty handed!
